Evolution

OS support

First Version: Only for Arch Linux

Current Version: Linux, Debian, Fedora, CentOS

Encryption Algorithm

First Version: RSA only

Current Version: RSA, MD5 and some variants.

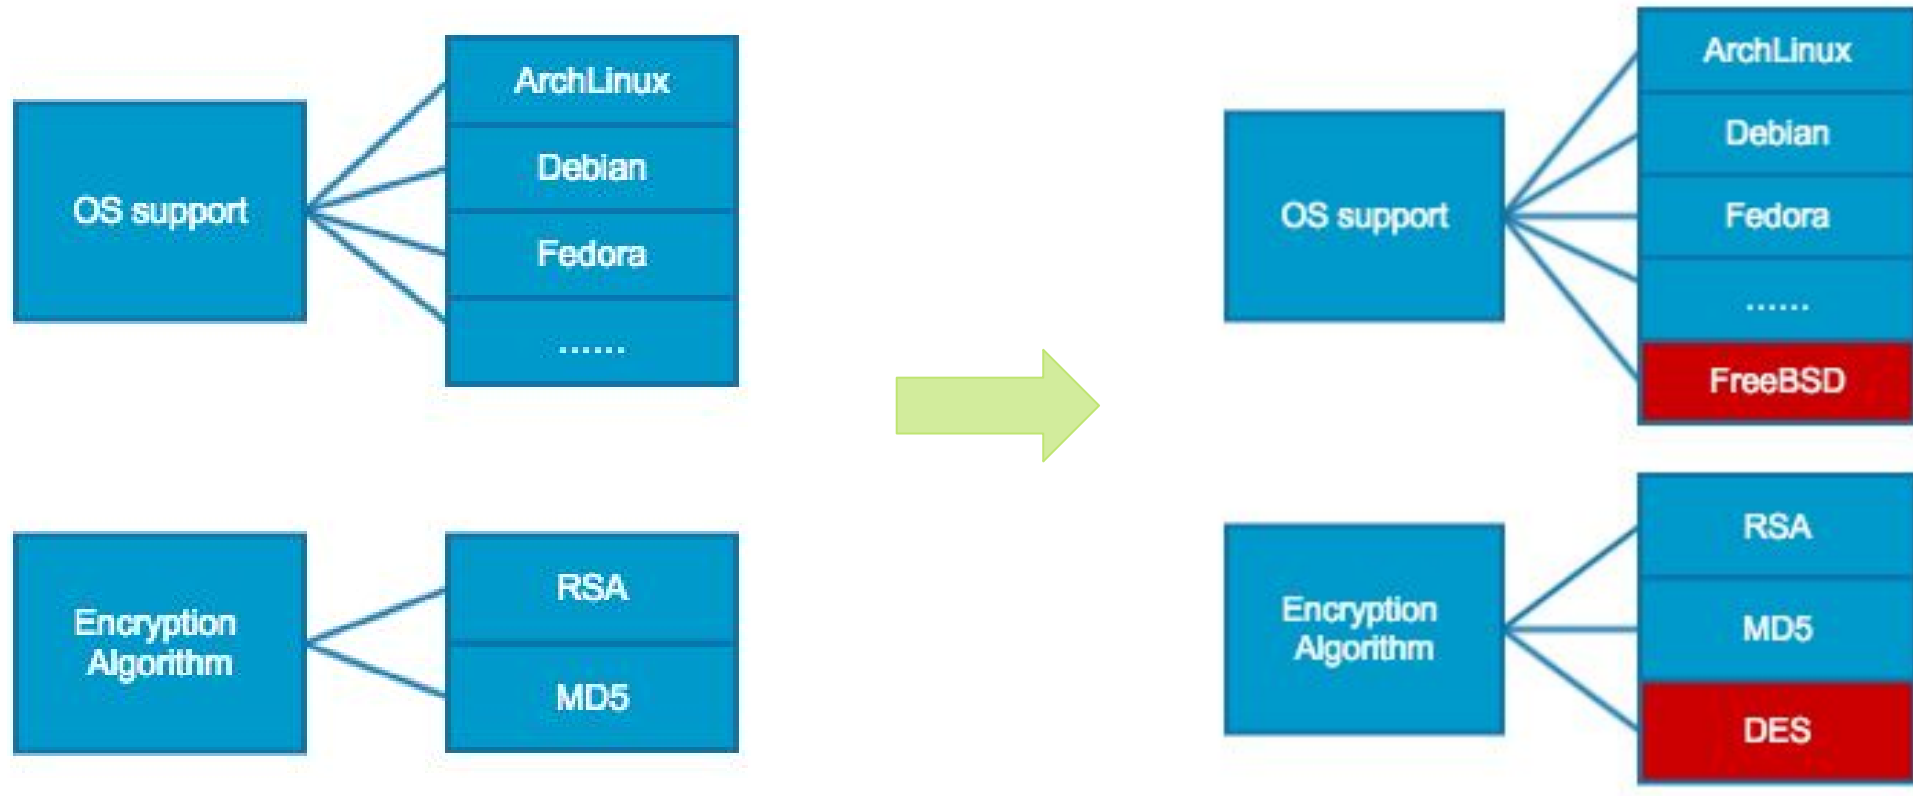

Plugins for Web Server Support

First Version: Apache

Current Version:

Multiple Versions of Apache and Nginx. Also includes Webroot plugin and Standalone plugin.

Things need to be done

Things need to be done

Redundancy

Unknown errors while installing.

Bugs

Contribution

#2612

Content: It is a display error in the documentation of Let's Encrypt at website "Read the Docs". A command line exceeds the border of the browser window. We made a horizontal scroll to display a long text (both in rst and html) and tested it with Chrome, Firefox and Safari at Mac OSX and Ubuntu.

#2659

Content: The documentation of Let's Encrypt is not so friendly to newcomers. Since Let's Encrypt is based on ACME protocol, we proposed to add a link to ACME specification. The accept of the request takes some time because the link added was not up to date and we fixed it later.

Contribution

YourDaddyIsHere commented 25 days ago

In previous two PR (#2658,#2657), I propose to add link to ACME spec in README.rst, but I link them to expired draft.
I fix it. Now it should link to correct document now.

Travis failures are unrelated to this PR. Merging master into this PR or rebasing will fix the problem.

@jsha: I'm not too worried about one off integration test failures, but here's a log where create_db.sh failed to run to completion.
