Before Let's Encrypt

Old Fashion: Submitted To all MANUAL **Certificate Signing** Certificate Request (CSR) Authority (CA) high COST Issues Public Subject Identifier Key **Key Pair** Created To Client Protected By Private Key X.509 Certificate Client Private **Key Store** Public Key

Fees for SSL certificate

What's Let's Encrypt

Download for free:

https://letsencrypt.org/getting-started/

 Install Let's Encrypt and Obtain certificate with one instruction:

letsencrypt-auto

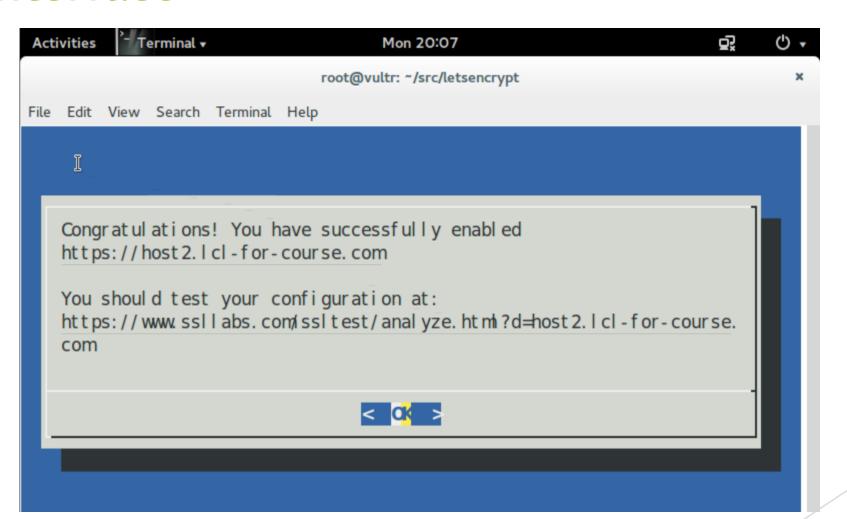

Renew certificate with one instruction:

letsencrypt renew

Interface

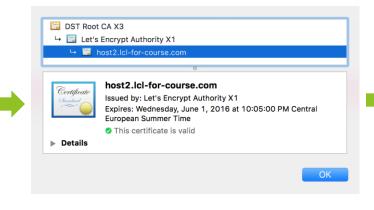

Interface

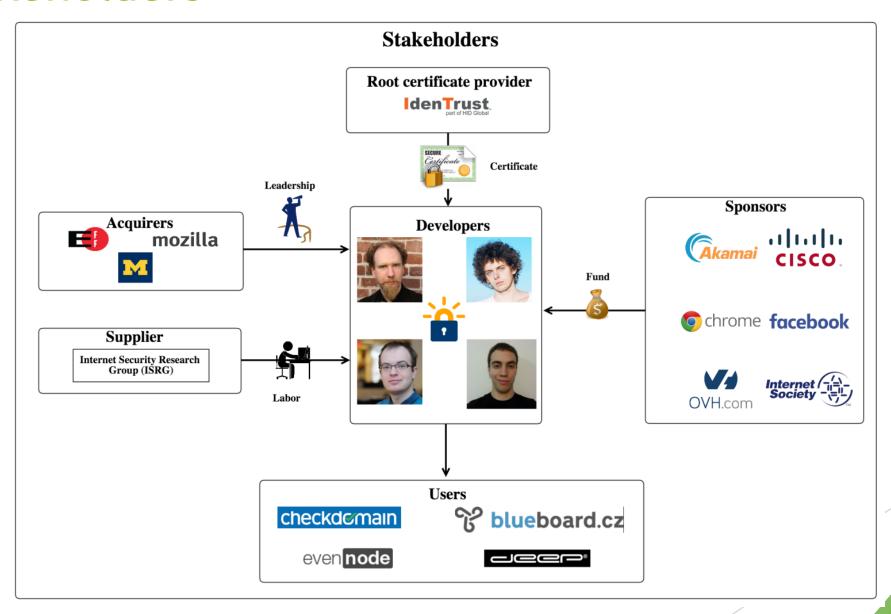

HTTP->HTTPS

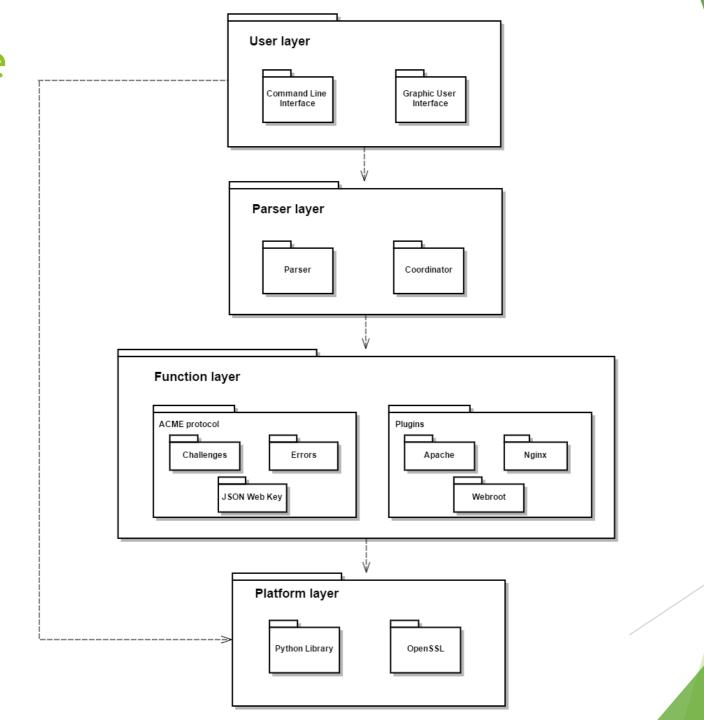

Stakeholders

Architecture

Main Issues

- Compatibility with OS like Debian
- Bugs with web server like nginx
- Documentation
- Some dead code and dead loop with out of date notes, making the code very hard to read

Plan

- Improve the documentation
- remove some dead code and dead loop

Q&A
